More details

Create the above design in React js and it should be a responsive design

Create another page where we can add rental car details like

1. Car name
2. Mileage
3. Location
4. Engine
5. Transmission
6. Price

This page design is not that much important just simple input field and submit button will also be fine

Rest all thing will be static but the cards with many car post are showing that will come from backend means that will be dynamic

User mysql as your database or you can user mongoDB

After that deploy the project on heroku and share the link with us

Design should be same as given in the prototype this is to see your skill and how much work we have to do to improve your skill

Deadline to complete this task is 2-3 days max
